ABSTRACT OF THE DISCLOSURE

1

- 2 A golf club head has a metal base, face and tubular neck and a carbon-
- 3 fiber cover. The face extends up vertically from one edge of the base. The tubular
- 4 neck is integrally connected to the base and the face. The cover is made of a
- 5 carbon-fiber material and is securely attached to the base and the face. Because
- 6 the carbon-fiber material is lighter than metal, the area of the face is enlarged. In
- 7 addition, the shock absorbing effect of the golf head club is also improved.
